

Market Briefs **Pro**

Read less news

Good morning, Pro Briefers!

In late March 2025, the world's most valuable automaker, Tesla, unveiled its latest innovation that had almost nothing to do with cars.

Instead, it shared with the world something else: humanoid robots.

The purpose? To show the world that robotics isn't science fiction anymore - but a technology that is on its way to becoming a reality.

That same month, Jensen Huang, the CEO of Nvidia (NVDA), also signaled that robotics would one day become a major part of Nvidia's business, calling it the next "multi-trillion industry."

 Market Briefs Pro

Image via Tesla

- Nvidia is the most valuable public company in the world by market cap and primarily designs semiconductors as of 2025.

Robotics is where we have identified an Innovation Shift - the next generation of robotics is creating opportunities for investors to potentially profit.

How? Up to this point, robotics has mostly been limited to the following:

- Warehouse and manufacturing: This is currently where robotics is used the most, with things like automation and assembly lines.

- Consumer electronics: Toys and things like the Roomba (the robot vacuum from iRobot) dominate this category.
- Future robotics: Humanoid and dog-like robots that are meant to simulate living things.

But even with all of the excitement surrounding robotics, most of the major companies in the space are not yet profitable.

But the opportunity for investors lies not in what is currently available for use, but what consumers and businesses are crafting for the future.

At its core this is a blend of robotics and AI to create what experts are calling Physical AI.

Some estimates have AI-Powered robotics growing to \$124 billion by 2030 with a 43% compound annual growth rate (CAGR).

Artificial Intelligence In Robotics Market Size & Share

Market Size in USD Billion

Market Overview

Study Period	2019 - 2030
Market Size (2025)	USD 25.02 Billion
Market Size (2030)	USD 126.13 Billion
Growth Rate (2025- 2030)	13.10% CAGR
Fastest Growing Market	Asia
Largest Market	Asia
Market Concentration	Medium

Major Players

Data via Mordor Intelligence

To learn more about this shift, we spoke to Jesse Reilly, an expert source working in robotics for a major robotics and large-cap company.

"Some places are pushing boundaries and trying to maximize what they do. Others are happy with what they've been doing and don't jump on new technologies until there's a really good ROI."

Jesse went on to add that, "As a person that works in these fields, these machines are definitely getting more complicated, it's kind of like job security. You learn all this stuff and you become hard to replace."

AI is the future of the robotics industry - now, let's discuss the opportunities that are bringing that future to life.

ANALYST REPORT

Tickers we're tracking:

Futurist: NVDA

Manufacturing: AMZN

Speculative play: SYM

ETFs: BOTZ

FUTURIST

AI Meets Robots

While Tesla made a splash with its humanoid robot event, there was one problem: Many of its “robots” were actually being piloted by remote workers.

There was much public backlash after those details were revealed.

Tesla shows promise in robotics but struggles with focus.

The company also relies heavily on Elon Musk's celebrity while juggling major priorities like lithium batteries and EVs.

When it comes to the future of robotics, Nvidia is currently leading the race.

Nvidia started its robotics program in 2024, but took a huge step in 2019: a program that is dubbed Jetson.

Here, the company plans on bringing AI and robotics together and quickly leapt years ahead of its competitors like Boston Dynamics and Tesla.

Since then, Nvidia has partnered with several tech and robotics companies to help it achieve its goals of a fully autonomous robot.

In early October 2025, Nvidia partnered with Japanese telecommunications and computer maker Fujitsu to deliver AI to Nvidia's robots.

The partnership will help Nvidia speed up the manufacturing process for its robot division, where it says its AI will be learning along the way.

Nvidia believes its chips will help power the AI and robotics revolution, giving the robots a more powerful brain to learn and act like humans.

Has that effort paid off? *It's not clear yet.* Nvidia earned \$116 billion in revenue in its fiscal year 2025, a massive jump from \$47 billion in 2024.

Its financials do not break down how much of that comes from robotics, as the majority of its revenue comes from semiconductor chip sales.

Nvidia 2025 Consolidated Income Statement		
Compute & Networking		
Year Ended Jan 26, 2025		
Revenue	\$	116,193
Other segment items (1)	\$	33,318
Operating income (loss)	\$	82,875
Year Ended Jan 28, 2024		
Revenue	\$	47,405
Other segment items (1)	\$	15,389
Operating income (loss)	\$	32,016
Year Ended Jan 29, 2023		
Revenue	\$	15,068
Other segment items (1)	\$	9,985
Operating income (loss)	\$	5,083

 Market Briefs Pro

Data [via](#) company 10-K

But, it has made it clear that it will intentionally seek more robotics opportunities in the future.

- Nvidia has invested hundreds of millions of dollars into robotics startups over the last 3 years.

This positions Nvidia as a leading opportunity for investors for years to come, as robotics spending continues to grow.

MANUFACTURING

Rise of Robot Workers

Robots are already being heavily used in warehouses, restaurants, and assembly lines to help cut costs and increase efficiency.

That puts those industries years ahead in terms of practical use for robots.

Our expert source Jesse Reilly spoke about AI's impact on the future of robotics and manufacturing as well.

"As far as technology advancing, the AI and large language models haven't hit manufacturing too much yet, but what it has done is if you're doing any kind of programming language...I'll get suggestions to complete portions of a code."

He then added, "...right now you need 5 robot programmers; that is moving more towards like one."

Many of the every-day robotics companies, such as FANUC, KUKA, and ABB, are either inaccessible on American exchanges, or are privately owned companies.

But one of the most valuable companies in the world by market cap recently launched its one millionth robot into its workforce: Amazon (AMZN).

Image [via](#) The Robot Report

The company has been an aggressive early adopter of robots over the years, launching its first-ever automation robot for its warehouses back in 2012.

Since then, Amazon has launched other types of robots from automated guided vehicles to mobile package delivery robots, and more.

- The company claims to have over a dozen robotic and automation-driven systems present in its facilities.

But, what's new? Amazon now has a division of its company dedicated solely to robotics; Amazon Robotics.

This is where Amazon is working on new innovations around robotics, which has led to some major financial victories.

Looking at Amazon's financials, you won't find a line item related to robotics specifically - that's because much of Amazon's robotics spending and revenue is represented by two more broad categories: Fulfillment and Logistics.

This part of Amazon's financials is where it has revealed one of its largest investments ever: It will spend \$100 billion into AI by the end of 2025.

- Overall, Amazon earned \$638 billion in revenue in 2024, an 11% increase from 2023.

Its push towards robotics has also allowed the company to open what it calls next-gen facilities.

What's that? These are distribution centers that are powered by AI and robotics, where sophisticated systems work directly with human workers.

 **Market Briefs Pro**

Data via Amazon

Its next-gen facility in Shreveport, Louisiana, which opened in 2024, has 10 times more robots than a typical Amazon distribution center.

Its enhanced use of robots was able to lower its total costs to run the facility by more than 25%.

- Morgan Stanley estimates that Amazon's use of robots and AI could save the company more than \$10 billion annually by 2030.

All of this makes them not only one of the biggest companies in the world, but also one of the biggest innovators in robotics to date.

Investors will want to keep an eye on Amazon's robotics developments in the future, as they continue to innovate and create new opportunities.

SPECULATIVE PLAY

Betting on the Bots

When it comes to robotics, investors may need to consider going global to access a local opportunity.

What does that mean? Boston Dynamics has been at the forefront of robotics technology for well over a decade.

- Its humanoid robots leverage behavior models and AI to walk on their own.

There's just one problem: 80% of Boston Dynamics is owned by Japanese auto giant Hyundai.

Hyundai does not trade publicly in the U.S. - this means American investors have very limited exposure to it through the OTC (over the counter) market.

We do not recommend OTC stocks, as the liquidity risks are very high and investing into an automotive company to get exposure to robotics may not be the best way to get exposure to this shift.

But, it is possible for some investors who don't mind extra risk to get exposure to Boston Dynamics through an OTC investment into Hyundai.

We have also identified a more speculative and potentially high growth opportunity for investors with Symbotic (SYM).

Symbotic Inc. (SYM)

YTD Price

63.96
(169.17%)

 Market Briefs Pro

Data [via](#) Yahoo! Finance

Breakdown. Amazon and Nvidia are mega-cap companies with stable revenue growth - they have the means to invest heavily into robotics, without it taking away from future profits.

Symbotic is trying to break into the robotics industry and provide Amazon-level robotics services to other warehouses, grocery stores, and distribution centers around the world.

How they stand out is in their approach - they provide end-to-end solutions for robotics, providing the AI for the brains and the robotics tech for the robots themselves.

As of October 2025, Symbotic's financials are a bit shaky. They are nearly profitable, but haven't achieved the milestone yet.

- It beat Wall Street earnings per share (EPS) estimates for three quarters in a row in 2025, and its EPS currently sits at \$-0.05.

Symbotic 2024 and 2025 EPS

Three Months Ended		
	June 28, 2025	June 29, 2024
Numerator - basic and diluted		
Net loss	\$ (31,925)	\$ (26,724)
Less: Net loss attributable to the noncontrolling interest	(26,012)	(22,043)
Net loss attributable to common stockholders	\$ (5,913)	\$ (4,681)
Denominator - basic and diluted		
Weighted-average shares of Class A common shares outstanding	109,201,745	102,414,284
Loss per share of Class A common stock - basic and diluted	\$ (0.05)	\$ (0.05)

 Market Briefs Pro

Data [via](#) company 10-Q

The company has also snagged some major partnerships with the likes of Walmart, with Symbotic now reporting it has a backlog of payments of over \$20 billion.

Most of that revenue is being spent on R&D, which is part of the reason why it has not been profitable yet.

Still, it's a name that has Wall Street excited. Shares of Symbotic are up over 169% year to date as of October 10th, 2025.

But if it will break out among dozens of other robotics companies, all with equally shaky financials, it is yet to be seen.

Symbotic 2025 Income Statement

	For the Three Months Ended		For the Nine Months Ended	
	June 28, 2025	June 29, 2024	June 28, 2025	June 29, 2024
Revenue:	\$	\$	\$	\$
Systems	559,108	450,595	1,536,539	1,168,993
Software maintenance and support	8,121	3,545	20,331	8,280
Operation services	24,892	16,198	71,595	46,340
Total revenue	592,121	470,338	1,628,465	1,223,613
Cost of revenue:	\$	\$	\$	\$
Systems	457,911	398,761	1,254,289	1,024,832
Software maintenance and support	1,756	2,539	5,735	6,201
Operation services	24,832	14,065	72,952	43,331

Data [via](#) company 10-Q

Investors with a little more risk tolerance may be able to snag this potential opportunity as it begins to ramp up its growth.

Available Funds

If your strategy leans more passive, there are some ETFs that can give investors exposure to the robotics industry.

Note: There are no ETFs that contain the three companies we featured in this report, Amazon, Nvidia, and Symbotic.

However, the Global X Robotics & Artificial Intelligence ETF (BOTZ) holds notable weight in both Nvidia and Symbotic.

Global X Robotics & Artificial Intelligence ETF (BOTZ) Top 10 Holdings

Top Holdings As of Oct 08 2025

3.37	PEGA	PEGASYSTEMS INC	2675860	56.20	1,890,716	106,258,239.20
3.31	DT	DYNATRACE INC	BJV2RD9	48.43	2,155,140	104,373,430.20
3.27	6273 JP	SMC CORP	6763965	331.77	310,785	103,109,340.06

The ETF's goal is to invest in companies that stand to benefit from the strengthened relationship between AI and robotics.

RISKS

Short-Circuit Risk

Whether it's Amazon, Nvidia, or Symbotic, robotics in its current state is a bit of a speculative investment.

Why? Next-gen robotics has a promising future, but it is still very much in the research and development phase.

And we just don't know when these types of physical AI robots will have practical use - it could be tomorrow, next year, a decade from now, or never.

So the reality is: Many of these high-spend robot investments will fail and cost businesses billions of dollars.

The giants, like Nvidia and Amazon, have diversified revenue models, and may be able to weather the storm and pivot again in the future.

The smaller names, like Symbotic, whose success relies on commercial viability, may be too early or too late to capitalize on this shift, effectively shutting down.

REVIEW

The Future of Robots

An investment in robotics is a bet on the next generation of physical AI.

Tesla and Nvidia don't just believe robotics are a new way to earn revenue; they believe robotics is the next innovation beyond AI.

With AI leading the way, there could be some consolidations in industries, according to our expert source, Jesse Reilly, where staffing needs also

change.

"It might start somewhere between 2 and 5 [years], you're really going to see it in 10-15 [years], the reason is, generally speaking, these manufacturing engineers aren't as expensive as a software engineer in Silicon Valley."

Artificial Intelligence In Robotics Market CAGR (%), Growth Rate by Region, 2025-2030

 **Market Briefs Pro**

Data [via](#) Mordor Intelligence

Regardless, that dream is increasing spending on robotics across the globe, which is leading to opportunities for investors to profit from the growth.

In the end, only time will tell if robotics becomes the next big thing or the next big bubble.

But either way, investors will want to pay attention to where money is being spent in this industry for the long term, as robotics continues to be a hot topic of discussion for years to come.
