Good morning, Pro Briefers!

On April 2nd, 2025, President Trump declared it “Liberation Day,” as he rolled out a series of reciprocal tariffs that were aimed at reducing the U.S. trade deficit.

The markets had a pretty strong reaction...

Shortly after, these tariffs were paused for 90 days, with the President saying the tariffs were part of a plan to bring these countries to the negotiating table.

Those 90 days? *They're just about over.*

Right after Independence Day, we're seeing the deal deadline of July 9th, 2025.

And that's where we've identified a Government Shift: Countries that have successfully secured trade agreements with the U.S. should see a boom while countries that haven't should see a drop after the deadline passes.

As of now, negotiations with many of our major trade partners have stalled. If the deadline passes and these tariffs go into effect, we could be looking at a similar drop to April 2nd.

But not for everyone - While certain industries will take a hit from the tariffs, the spotlight should shift onto the deals that **have** been made.

What does this mean? Companies tied to countries with trade deals will likely go up as the rest of the markets go down.

So we have to ask - who's on the list?

Right now, the list of finished trade deals is pretty small - just three countries, to be exact.

- The U.K.
- China
- Vietnam

And while the U.S. Treasury Department has announced that many deals are "close," some countries have asked for an extension of the deadline.

The only other country that seems sure to have a deal by the July 9th deadline is India.

Market Briefs Pro

Data [via](#) The White House

- These 3 tariff deals are from a list of 85 countries, and could cause a major shift in global economic power.

President Trump hopes to have more deals signed before the deadline, but as negotiations have broken down, the President is stepping up.

- On July 4th, 2025, President Trump announced that letters detailing tariffs as high as 70% would go to countries without trade deals starting August 1st, 2025.

This pressure could cause a strong market reaction as soon as Monday, July 7th, 2025 - and could even cause greater political issues.

In a statement released to our team, globally recognized trade expert Noel Nevsehir stated:

"Protectionist measures are rarely self-contained or isolated with trade and investment transactions. They inevitably spill over into others facets of international relations from the Peloponnesian War to World War II."

So how can an investor take advantage?

By looking at countries with successful industries that have been threatened by tariffs.

The announcement of these deals, and the details of what is in them, could cause a major boom for companies affected.

By focusing on what we know, and how it affects established industries, investors can cut through the chaos, and look for stable growth.

This week, we're going to dive into some of these countries that have stable industries, with companies poised to benefit from the details we know.

How did we do? Reply directly to this newsletter to let us know how you took action with this Shift!

UNITED KINGDOM

Economic Prosperity Deal

The first major trade deal as a result of Liberation Day was the U.S.-U.K. Economic Prosperity Deal (EPD), announced on May 8th, 2025.

The EPD took aim at several of the key-exports for both countries, seeking to exempt them from tariffs.

PRESIDENT DONALD J. TRUMP

Fact Sheet: Implementing the General Terms of the U.S.-UK Economic Prosperity Deal

The White House | June 17, 2025

 Market Briefs Pro

Data [via](#) The White House

Major provisions include:

- The U.K. will eliminate the tariff on U.S. ethanol.
- The U.K. will up U.S. beef imports by 12,000 metric tons.
- The U.S. will remove the tariff on U.K. steel and aluminum.
- The U.S. will reduce tariffs on key U.K. industries such as auto & aerospace.

While manufacturing seems to be a major driver, there's one U.S. tariff that has been hitting the U.K. particularly hard.

Alcohol.

Did you know? The U.K. is the largest exporter of whiskey in the world.

Leading 5 destinations for whisky exported from the United Kingdom in 2024, by value

 **Market Briefs Pro**

Data [via](#) Statista

And the biggest destination for that whiskey is the U.S.

- The U.S. imported an estimated 1 billion Great British Pounds (GBP) worth of whiskey in 2024.

While the global 10% tariff on this whiskey still remains in place, avoiding the additional targeted tariff will save an estimated hundreds of millions for U.K. whiskey producers.

- In 2019, Trump imposed a 25% tariff on U.K. whiskey, which costs an estimated loss of 600 million GBP - this tariff ended in 2021.

With the U.K. set to avoid the larger tariff, and other major whiskey producers (such as Japan) unable to secure trade deals, U.K. liquor companies could see a boom.

One of the most influential liquor companies in the world is the U.K. based Diageo (DEO).

Image [via](#) Food Manufacturing

- By owning brands like Johnny Walker, Captain Morgan, and Smirnoff - Diageo is one of the largest producers of spirits in the world.

Double Dipping: In addition to the reduced tariff on its U.K. brands, Diageo also owns several brands that are produced within the U.S., which will be fully exempt from the global tariffs.

Diageo shares have taken a hit in recent years, and are down 22% over the last five. The company faces a number of issues including:

- Reduced global alcohol consumption
- An increasingly competitive industry
- Global trade roadblocks

But with these tariffs set to eliminate some of the roadblocks, and potentially raise the prices of their competitors, Diageo's stock could be looking at a breakout.

Data via Yahoo! Finance

- With a P/E of 15.5, Diageo is a potentially undervalued stock, even before this shift takes effect.

But liquor isn't the only U.K. good facing favorable conditions due to this deal.

One of the major goals of the EPD is to lower import costs for both the U.S. and U.K. as well as simplify logistics and customs.

This is good for any company in the consumer goods sector, especially for a massive consumer goods supplier like Unilever (UL).

Image [via](#) Happi

- From Dove soap to Popsickle, Unilever is the company behind a large number of popular U.S. consumer brands.

Similarly to Diageo, Unilever has a heavy manufacturing presence in the U.S., despite its U.K. roots.

With the EDP secured, Unilever has stated that the impact of U.S. tariffs would be "limited," and maintained its 2025 outlook.

INDIA

From IT to PhD

The final details of the deal won't be unveiled until the July 9th deadline, but both the U.S. Treasury Department and the Indian government said a deal is ready.

Here's what we know - the deal is said to include things like:

- Zero-for-zero tariffs on auto parts.

- Tariff exemptions for pharmaceuticals.
- Support for digital services and IT.

These terms would directly benefit some of India's biggest exports.

Many people think of tech or cars as India's major industries, but in the U.S., one of India's largest exports is pharmaceuticals.

Indian Generic Drugs Market

Market forecast to grow at a CAGR of 5.8%

 **Market Briefs Pro**

Data [via](#) Research & Markets

- 47% of all generic drugs in the U.S. are imported from India.

So it's no surprise that the deal is said to have an exemption on pharmaceuticals.

One of the largest Indian drug exporters by volume is Dr. Reddy's Laboratories (RDY).

North America is Dr. Reddy's largest market, and in 2024, it accounted for \$1.5 billion in revenue, 47% of their total.

- This is a 28% year-over-year increase in North American sales.

Dr. Reddy's has been showing strong growth, with share prices up 42% in the last 5 years.

Data via Yahoo! Finance

The company had one major roadblock - **Potential tariffs**.

- Dr. Reddy's is down 5% year to date, with previous highs being wiped out by the tariff announcement on Liberation Day.

But shares have been steadily recovering. The announcement of pharmaceutical tariff exemption would allow Dr. Reddy's to maintain their pricing and continue growing.

In addition to pharmaceuticals, the trade deal is expected to make exemptions for tech and IT services.

That's because 4 of India's top 6 companies by market cap fall into this category.

The company that could benefit the most from this exemption is Infosys (INFY).

- Infosys ranks as the 6th largest company in India by market cap, with a cap of \$78 billion.

Infosys has a large number of offerings - everything from digital banking to cloud storage.

Despite being an Indian company, their largest market by far is the United States.

- Over 59% of Infosys's revenue comes from North American sales, around \$11 billion of their \$18 billion revenue.

Much like Dr. Reddy, Infosys has been showing strong growth due to its competitive pricing in the American market, and has been struggling since the tariff announcement in April.

Infosys Limited (INFY)

5 Year Price

18.88
(95.04%)

 **Market Briefs Pro**

Data [via](#) Yahoo! Finance

Despite recent losses, shares of Infosys are still up 95% over the last 5 years.

Once the trade deal is finalized, Infosys could adjust back to its pre-Liberation Day levels, and continue its growth.

Both Dr. Reddy's and Infosys can be found in the targeted iShares MSCI India ETF (INDA).

iShares MSCI India ETF (INDA)

CHINA

Cheap Goods - Big Gains

The Liberation Day tariff announcements shook the global markets, but in addition to that, *it kicked off a trade war with China.*

- In the days following the tariff announcement, the U.S. and China went back and forth, with the tariff on Chinese products reaching 145%.

The big issue: That high of a tariff essentially bans trade, and the U.S. is highly dependent on Chinese imports.

A temporary truce brought the tariff rate down to 30% until the July 9th, 2025 deadline, and a larger deal was announced on June 27th, 2025.

Currently, details are sparse, with the bulk of the deal revolving around rare minerals and semiconductors.

But 77% of U.S. imports from China are consumer goods, such as phones, toys, and video games.

TOP U.S. IMPORTS FROM CHINA

PRODUCTS		US\$	CHANGE
1	Phone devices including smartphones	\$51,468,009,000	-6.8%
2	Computers, optical readers	\$36,735,827,000	-7.3%
3	Electric storage batteries	\$18,141,058,000	+14.5%
4	Models, puzzles, miscellaneous toys	\$14,423,144,000	+10.7%
5	Automobile parts/ accessories	\$10,112,547,000	+2%
6	Seats (excluding barber/ dentist chairs)	\$7,492,936,000	+1.9%
7	Table games, bowling equipment	\$7,243,007,000	-33.4%
8	Electric water heaters, hair dryers	\$7,002,064,000	+9.2%
9	TV receivers/monitors/ projectors	\$6,995,666,000	+2.8%
10	Miscellaneous plastic items	\$6,917,145,000	+8.9%

While we lack full details, we know this trade deal will either maintain, or potentially lower the general tariff on Chinese goods coming into the U.S..

Major tech companies like Nvidia (NVDA) and Taiwan Semiconductor (TSM) are the focus, and clear winners in this deal - Chinese consumer goods companies like Alibaba (BABA) and Pinduodo (PDD) might be major, unexpected winners.

Chinese consumer goods imports is a \$350 billion dollar industry. And companies like BABA and PDD, hold a big slice of that pie.

Data [via](#) Yahoo! Finance

Even with disruptions from the U.S.-China trade war, BABA is up more than 30% YTD and more than 50% over the last year.

That growth is fueled by its rapidly growing international segment. Their largest international market? **The United States.**

- Alibaba's international segment reported \$130 billion revenue in 2024, a 32% increase year-over-year.

Pinduoduo has seen more of a struggle over the past year, with its U.S. platform Temu growing rapidly, but missing Wall Street projections.

Why? Changing trade policies with the U.S.

- In addition to Liberation Day tariffs, the U.S. eliminated its tariff exemption for low-cost goods from China and Hong Kong.

Data [via](#) Yahoo! Finance

Shares of PDD are down more than 20% over the last year, but the growth of its U.S. brand, Temu, is undeniable.

- Temu is projected to be about 43% of PDD's \$53 billion in revenue.

A lasting trade deal could stabilize PDD's international model, and share prices could grow alongside the brand.

Both of these companies, as well as other Chinese ecommerce companies can be found in the KraneShares CSI China Internet ETF (KWEB).

Data [via](#) Yahoo! Finance

RISKS

A Rapidly Changing Landscape

U.S. trade policy has been extremely volatile.

While the hope is that these lead to long-term stability, the details of these trade agreements is largely unknown, and recent history has shown that investors may be in for some surprises on the July 9th deadline.

Trade agreements can also be renegotiated if either party becomes unhappy with the results, or there are administration changes in the U.S. or partner countries.

Additional trade deals, or lack of trade deals, between the U.S. and other major partners such as Japan and South Korea, could drastically alter the global market.

Mr. Nevsehir's statement could also be correct, with souring trade relationships leading to more market volatility as political relations break down.

REVIEW

Building Global Trade

While we can't predict exactly what will happen on July 9th, or the results of ongoing negotiations with additional countries - the opportunities presented should be unaffected.

By focusing on industries affected by the details we know, investors can track how these deals might affect the market.

The Trump administration hopes these trade deals are built to last, and will be the foundation for a new generation of the American economy.

By capitalizing on these deals as they're announced, investors can hope to get in on the ground level of a new era in global trade.
