Hey, Pro Briefers!

More Americans are now turning to smaller appliances to do everything from cook, clean, and even mow the lawn.

This is where we've identified a Main Street shift:

As small appliance demand grows, so will the opportunities around small appliances, their hardware, replacement, and safety testing.

Let's break down why investors may want to keep an eye on this shift, starting with the basics.

A growing number of Americans have purchased small appliances in place of their larger counterparts.

To dive deeper into this shift, we polled 400 Briefers, and gathered exclusive data for this report.

- Nearly 94% of them own at least one small appliance.
- 25% of Briefers have either replaced a large appliance with a small one, or are considering it.

Appliance Ownership Changes From 2022-2023

Ownership Of Items In The Home

 Market Briefs Pro

Data [via](#) Biz Community

Air fryer sales have also outpaced oven sales in the U.S. every year since 2020.

- 66% of Americans in 2025 own an air fryer, according to the Chicago Tribune - that's up from 36% in 2020.

Is it because Americans like to cook? *Not exactly.* It's because Americans *don't* like to cook...

- 76% who use their air fryers once a week say they like it because of how simple it is to cook full meals.

Now, small appliances are helping to solve several other problems that Americans have faced for years.

How? Appliances are getting smaller, cheaper, and more efficient - that makes them easier to use, and cheaper to replace and repair.

- Angie's List found that the average cost to fix an oven was \$130. The average price of a brand-new air fryer is around \$100.

Data [via](#) A Fresher Home

For full transparency: People are still buying large appliances.

- The large appliance market hit \$400 billion in value for the first time in 2024 and is expected to reach \$500 billion by 2028.

But what we are seeing is people are moving away from traditional larger appliances to smaller ones.

Of Briefers who own small appliances, 73% said they own a small appliance because they're easier to use than a large one.

That's creating a new opportunity for businesses to focus on smaller appliances, as consumer demand shifts towards smaller, cost effective, and easy to use appliances.

Before we break down this Shift: We want to take a moment to remember and honor all of those who lost their life defending this nation as a part of our nation's military during this Memorial Day weekend.

Your sacrifice will never be forgotten - thank you for your service.

SMALL APPLIANCES

Small Gadgets, Big Profits

Instead of replacing an oven, people are buying air fryers - and instead of a new hot water tank, more Americans are switching to smaller tankless water heaters.

- A study by SharkNinja (SN) in 2024 revealed 73% of people prefer to use an air fryer over an oven.
- Our survey found that 80% our Briefers own small vacuums.

What's going on? Over 50% of Americans hate cooking and cleaning according to a survey from People.

Dishwashers and ovens do the cleaning and cooking for you - but they're also less efficient to use.

- Countertop dishwashers have been found to be more efficient, while cleaning almost the same amount of dishes as a full dishwasher.

The same can be said for almost all large appliances - smaller appliances save people money by being more energy efficient.

Plus, there are more single households today than ever before in American history, as nearly 30% of U.S. households only have one person living there.

- We found nearly 12% of surveyed Briefers live in single person households.

Number Of Single-Person Households In The United States From 1960 To 2023

(In Millions)

Market Briefs Pro

Data via Statista

In English: It's costly for one person to heat up an entire oven for a few slices of frozen pizza, or run the entire dishwasher for a few dirty plates - so, many are turning to smaller appliances.

One company that creates small appliances for consumers is SharkNinja.

The company primarily focuses on cooking and cleaning appliances, with its own brand of vacuums, blenders, air fryers, and more.

From 2023 to 2024, SharkNinja increased its total revenue by almost 30% to reach \$5.53 billion.

SharkNinja, Inc. (SN)

(Revenues In \$Millions)

 Market Briefs Pro

Data [via](#) company reports

It saw the most growth in its food prep appliances - things like ice cream makers and frozen drink devices led this segment's 89% annual growth last year.

As of 2025, 30% of U.S. homes own at least one SharkNinja product, up from 20% in 2020.

It's also innovating - SharkNinja released 25 new products in 2023, with plans to drop more this year.

Data [via](#) Yahoo! Finance

Deere & Co (DE) is also making moves in the small appliance industry, but this time in the outdoors.

Known for its John Deere tractors, John Deere debuted an autonomous robot lawnmower this year at the Consumer Electronics Expo.

- Shares of the company are up almost 20% in 2025.

The company is looking to launch the robot lawnmowers sometime in 2026 and join the likes of Honda and Stanley Black & Decker, two other publicly traded competitors.

Deere & Company (DE)

(Revenues In \$Millions)

 Market Briefs Pro

Data [via](#) company reports

The whole story: Deere & Co's revenue actually fell by 15% annually in 2024.

- The company cited lower demand for agricultural equipment and turf, its two largest market segments, a trend it expects to reverse over time.

Then why are shares up? Deere owns 70% of the lawn equipment market and many analysts are confident that their innovations will spark demand in the future.

(+256.71%)

 Market Briefs Pro

Data [via](#) Yahoo! Finance

Deere & Co is also a dividend aristocrat - meaning it has increased dividends for its investors every year for at least the last 25 years.

- The company has increased its dividends for 38 consecutive years.

MANUFACTURING

How It's Made

Like any appliance, small appliances need microchips, control boards, and other pieces of hardware and software.

- **The difference?** The majority of small appliances are also smart appliances - meaning they have WiFi, more sensors, and are even sometimes built with AI.

- 10% of worldwide households owned at least one smart appliance in 2024, which is expected to reach 30% within the next five years according to Statista.

In short - companies who produce small smart appliances usually don't make this tech themselves, they outsource it to another company that specializes in creating smart tech for appliances.

But the jury is still out on smart small appliances:

- 35% of Briefers say they avoid appliances with smart features.
- Demand for smart appliances is rising, according to Town Appliance, despite nearly 50% of consumers refusing to connect them to WiFi.

Data [via](#) the Fed

One of the companies building consumer tech for businesses is Flex (FLEX).

Flex has grown to become one of the largest electronics manufacturing companies in the world, and holds 8% of the entire industry.

But where it has really managed to stand out in recent years is with the rise of AI.

As more appliance companies are looking for smart tech, Flex has been investing in its data center solutions segment.

Data [via](#) Yahoo! Finance

Why? Appliance companies use smart tech to store data for users - Flex creates smart tech for data center operations to control things like power distribution, cooling, and other functions.

- Flex acquired Crown Technical Systems for \$325 million in October 2024 in order to grow its data center tech.

While its revenue fell in 2024, its net income - how much it made after all of its expenses - actually grew by 26.8%, reaching over \$1 billion for the first time ever.

Data [via](#) company reports

Jabil, Inc. (JBL) also works to manufacture small appliance tech, particularly with its servers.

Traditional appliances are designed to work independently - but smart appliances need to send the data they collect somewhere.

Jabil is one of the premier builders of smart tech servers, as it creates customizable servers that can utilize advanced chips from Nvidia (NVDA) and AMD (AMD).

Jabil Inc. (JBL)

(+475.01 %)

 Market Briefs Pro

Data [via](#) Yahoo! Finance

To put it another way - your vacuum needs a digital brain to decide when to clean the dog hair from your carpet.

For that brain to work, companies need Jabil's servers that contain powerful chips from the likes of Nvidia or AMD.

In 2024, the company's net income reached a record high of \$1.38 billion, up from \$818 million the year before.

Jabil, Inc. (JBL)

(Revenues In \$Millions)

 Market Briefs Pro

Data [via](#) company reports

- Jabil also operates 100 different manufacturing plants around the world, including in China, making it a top server choice for many appliance companies.

While there are no ETFs for small appliance manufacturers, investors can still gain some exposure to companies building AI appliances through the First Trust Nasdaq Artificial Intelligence and Robotics ETF (ROBT).

TESTING

Repair or Replace?

According to our exclusive survey, roughly 66% of Briefers don't fix appliances when they break. Instead, they replace them.

Breakdown. Most large appliances are 30% cheaper today than they were 10 years ago - small appliances are even less expensive in most cases.

However, it often costs more for a business to fix a small appliance than to just replace it.

The bottom line: When a customer's air fryer or countertop dishwasher

breaks, companies send them a new one.

Data [via](#) Today's Homeowner

However, small appliance companies destroy or throw away most of the returns they get - but, they still need to track those returns.

Why? Because small appliances get replaced rather than repaired, companies issue warranties.

Avery Dennison Corporation (AVY) specifically works with small appliance companies to track warranties by using smart tech.

- Its RFID is basically like a keycard - it's sometimes attached to the product or attached to other details like an instruction manual.

Avery Dennison Corporation (AVY)

5 Year Price →

180.12
(+70.07%)

 **Market Briefs Pro**

Data [via](#) Yahoo! Finance

The company's RFID tech is currently being used to track around 28 billion different products worldwide.

That could increase as demand for small appliances grows.

In 2024, the company recorded \$8.8 billion in revenue, a 4.4% jump from 2023.

40% of that revenue comes from emerging markets, which includes China.

- China is the largest global market for small appliances, according to Statista.

Avery Dennison Corporation (AVY)

(Revenues In \$Millions)

 Market Briefs Pro

Data [via](#) company reports

Returns cost appliance companies around 10-20% of the items price though - so a focus has now been on reducing those returns.

One way to do that is by increasing product quality - something that Ansys Inc. (ANSS) is helping small appliance companies with.

What does it do? Ansys creates product simulations to test for things like durability and quality before a product is launched.

ANSYS, Inc. (ANSS)

5 Year Price →

343
(+28.81%)

 Market Briefs Pro

Data [via](#) Yahoo! Finance

It does this with AI - by analyzing customer feedback Ansys can create new scenarios to test the wear and tear of upcoming products.

In simpler terms - instead of building 1,000 air fryers, and then breaking them through testing, Ansys helps companies test them digitally first.

- PubMed Central found that this simulation testing can save companies around \$100 million annually.

ANSYS, Inc. (ANSS)

(Revenues In \$Millions)

 Market Briefs Pro

Data [via](#) Yahoo! Finance

In 2024, Ansys made \$2.54 billion in revenue, a 12% increase year over year.

And as small appliance brands like SharkNinja plan on releasing several new products over the next few years, testing them first will be crucial.

That means demand for simulation testing from Ansys could grow in the future.

RISKS

Small Problem...

Small appliances are making big waves for investors - but every opportunity comes with risks:

What consumers buy is always changing and there's a chance that small appliances may not be a household favorite forever.

- 37% of U.S. households had a dishwasher in 1980 - that number has fallen to only 24% in 2025.

And of the 24% of homes that have a dishwasher, only 80% use it on a regular basis, so standard household appliances change over time.

In addition, consumer appliances and electronics are the most exposed to things like tariffs.

The San Francisco Fed found that 70-80% of consumer products are manufactured in China, which has been a target of increased tariffs by the Trump administration.

Finally, economic downturns usually lead to lower spending from consumers, especially on electronics that are not deemed essential.

If our economy shrinks in the future, small appliance brands could lose money and see share prices fall as investors search for other opportunities.

REVIEW

Air Fryers > Ovens

Large appliances are out and small appliances are in - that's creating new opportunities for investors.

Statista estimates that the small appliance market will grow to \$392 billion by 2034, up from \$241 billion in 2023.

- \$40 billion of that will come from North America, while \$59 billion will come from China, the industry's two largest segments.

In fact - over 50% of Briefers said they are more likely to purchase a small appliance over a large one that does the same thing in the future.

U.S. Household Appliances Industry Revenue Growth, 2018–2028

 **Market Briefs Pro**

Data [via](#) Coolest Gadgets

That's because demand for housing, income, cooking preference, and easy-to-use appliances is changing, and small appliances like vacuums and air fryers are winning the race.

So, investors will want to keep an eye on the companies that create, manufacture, and help manage small appliances as this shift continues.
