

WEALTH PRESERVATION

June 2026 Report

The U.S. is facing a generational shift right now.

First, the national debt keeps climbing, now hovering around \$40 trillion.

Second, inflation recently hit 4.2%, the hottest in nearly three years, and it hasn't dipped below 2.3% since 2021. That means prices for everyday goods are staying higher for longer.

And once you account for those prices, the average worker's paycheck is actually shrinking.

There's even a new chair at the Federal Reserve, Kevin Warsh, which adds another layer of uncertainty about where interest rates head next.

That's leading many experts to worry a recession could be near - the perfect storm pressuring American finances.

At the same time, the stock market just hit a brand-new record high.

In other words, two corners of the market are telling completely opposite stories.

That tug-of-war between a shaky economy and a soaring market is the **Broad Market Shift** our analysts have spotted: If a storm hits, investors don't want to be guessing - they need an asset that keeps on paying.

And there's no more reliable customer on Earth than the U.S. government, which keeps spending on defense and national security whether times are good or bad.

Even better, one slice of that government spending is riding a real growth wave of its own - America's nuclear comeback.

Why? Data centers need consistent power and our grid can't keep up.

- Tech giants plan on spending \$500 billion+ on AI this year alone.

The bottom line: Our analysts are filing where the steady money is growing, whether we're in a recession or boom.

Put steady protection and that growth together, and you get wealth that can hold up in a downturn while still having room to build.

For wealth-preserving investors, our analysts are adding two opportunities to our Briefs Wealth Preservation Portfolio - Lockheed Martin (LMT) and BWX Technologies (BWXT).

Let's break down both.

LOCKHEED MARTIN (LMT)

Lockheed Martin builds fighter jets and missile-defense systems for the U.S. government and its allies.

Why is that defensive? Because the government keeps spending on defense in good times and bad.

And right now that spending is booming - the proposed 2027 defense budget is a record \$1.5 trillion.

Lockheed has signed a deal to more than quadruple production of its THAAD missile interceptors - from 96 to 400 a year - plus a fresh \$4.7 billion missile contract.

- It's even building a new factory in Arkansas to keep up.

These aren't hopes or guesses. They're signed contracts that stretch out for years, sometimes decades, like its F-35 fighter jet program.

That steady work pays for steady income. Lockheed has raised its dividend for 22 years in a row and buys back its own shares on top of that.

And even if the economy breaks or inflation stays hot, defense budgets tend to rise anyway. If nervous investors flee risky stocks, they often run toward safe, government-backed earners like Lockheed.

Exit Trigger: This whole idea leans on defense budgets continuing to climb. If Congress fails to pass the expected military spending, or the F-35 program hits a long delay, Lockheed's growth could shrink, impacting returns.

BWX TECHNOLOGIES (BWXT)

The second opportunity is another company with a customer that simply can't walk away - BWX Technologies.

BWXT makes the nuclear reactors that power the U.S. Navy's submarines and aircraft carriers. It's basically the only company in America that does it.

In plain English: the Navy can't shop around, and it builds these ships on plans that stretch out for decades. So BWXT's work is locked in far into the future, good times or bad.

BWXT also builds parts for regular nuclear power plants - and nuclear power is making a big comeback.

Why? All those AI data centers tech giants are racing to build need huge amounts of power, and nuclear is one of the cleanest ways to get it.

- In May 2026, the federal government signed an order to speed up new reactor projects across the country.

For a defensive investor, the whole appeal is that if the economy sinks, BWXT still has long-term guaranteed contracts. And the nuclear comeback gives the company room to grow on top of that.

It's also a business almost no one can copy. It would take a rival decades and a fortune to catch up - exactly the kind of protection a defensive investor likes.

Exit Trigger: BWXT rests on two things - steady Navy orders and that nuclear push actually happening. If submarine work slows down, or the government's nuclear plan turns into talk with no real dollars behind it, the case gets weaker.

Risks We're Watching

The biggest risk to any defensive plan is simple: the economy might just stay strong.

If stocks keep climbing, these safe picks would trail behind the big gains others are grabbing. Investors may still see steady returns, but likely smaller ones than the hottest growth stocks.

For Lockheed, the danger is a surprise budget cut or a stumble in a major program like the F-35.

For BWX Technologies, the danger is a slowdown in Navy orders or a nuclear push that stalls - if the government's reactor plans lose steam, so does the growth side of the story.

The Takeaway

Right now, a perfect storm is brewing in the U.S. economy.

Debt is growing, inflation is high, and meanwhile the stock market is partying like nothing is wrong.

Defensive investors don't have to guess - there are opportunities that let them weather the storm.

- Lockheed Martin offers steady, government-backed income that tends to grow whether the economy booms or busts.
- BWX Technologies brings the same locked-in government demand - building the reactors that run the Navy's submarines and carriers - plus a front-row seat to America's nuclear comeback.

Two Picks. One Goal: Protect Your Wealth		
	Lockheed Martin (LMT)	BWX Technologies (BWXT)
What they build	Fighter jets & missile-defense systems	Nuclear reactors for Navy subs & carriers
The customer	U.S. government & its allies	The U.S. Navy — it can't shop elsewhere
Why it's defensive	Defense spending rises in good times & bad	Decades-long, locked-in Navy contracts
The moat	Multi-decade programs like the F-35	Essentially the only U.S. builder
Growth kicker	Record \$1.5T proposed 2027 budget	Nuclear comeback to power AI data centers
Exit trigger	A major budget cut or F-35 stumble	Slower Navy orders or a stalled nuclear push

 Briefs Pro

Neither will make you rich overnight, but both are built to protect your wealth if the storm clouds open.

For defensive investors who want to sleep at night while keeping their money's value intact, these two are worth keeping an eye on for the long term.

- Briefs Finance Team

The Briefs Finance Team often invests in the same stocks and assets we cover. Why? Because we believe in practicing what we preach (and preaching what we practice). But keep in mind: We're not financial advisors. Everything we provide is for education. You've got to do your own due diligence and think about what makes sense for your own financial situation. Investing has risks. You are never guaranteed to make money when you invest, you might even lose money. If you're looking for personalized financial advice, we highly recommend speaking with a licensed financial advisor. Our mission? It's simple - to help you be better with money. Included interviews have been edited for length and clarity.
